

MANUAL

1. Starting POLARIS

To launch POLARIS, follow the steps below:

Step 1 – Open the Project Files

Open the POLARIS project in RStudio and locate the following files:

- search_functions2.R
- app2.R

Step 2 – Run the Search Functions File

Open the file search_functions2.R.

Click the **Run** button in RStudio to execute the script. This step loads the functions required for database connections, search execution, data processing, and file export.

Wait until the script finishes running before proceeding.

Step 3 – Run the Application File

Open the file app2.R.

Click the **Run App** button in RStudio.

POLARIS will initialize and launch the graphical user interface (GUI).

Step 4 – Access the POLARIS Interface

Once the application has loaded, the POLARIS front end will open in a new RStudio window or in your default web browser.

You are now ready to configure searches, select databases, monitor search progress, and export results.
